

AIRLINE ANALYSIS DASHBOARD

Interactive Excel Dashboard for Indian Domestic Flight Pricing & Route Insights

Data Source: Indian Domestic Airline Flight Dataset

Tool: Microsoft Excel — Pivot Tables, Charts & Slicers

Prepared for GitHub Project Showcase

AGENDA

What We'll Cover

01

Key Business Questions

The KPIs this dashboard was built to answer

02

Process & Methodology

From raw data to a finished interactive dashboard

03

Dashboard Overview

Slicers, charts, and KPI cards explained

04

Insights

Business & Economy class findings across routes

05

Conclusion

Key takeaways and practical value

Key Business Questions

This dashboard was designed to answer six core questions about the Indian airline market.

1 Pricing

What min/max ticket price does each airline charge, and how does it vary by class?

2 Route Comparison

How do fares and flight volume differ across source-destination city pairs?

3 Booking Timing

How does average price move as days-left-to-departure decreases?

4 Flight Volume

Which airlines and routes have the highest departure/arrival counts?

5 Stops

Do zero, one, or multi-stop flights dominate — and how does that affect price?

6 Class-wise Behavior

How does pricing and availability differ between Business and Economy?

Process & Methodology

Pie Chart

Stop's Total Flights (Zero/One/Two+)

Coverage at a Glance

AIRLINES

Air India · Vistara · AirAsia · GO_FIRST · Indigo · SpiceJet

CITIES

Bangalore · Chennai · Delhi · Hyderabad · Kolkata · Mumbai

NOTE

Business Class is served only by Air India & Vistara; Economy Class includes all six airlines.

Business Class Insights

Bangalore → Hyderabad (Business Class)

- Only Air India and Vistara operate Business Class across all routes.
- Bangalore → Hyderabad: 3,014 flights; Air India max ₹61,212 vs Vistara max ₹83,239.
- Vistara consistently prices higher than Air India on nearly every route.
- Delhi → Kolkata is the most expensive Business Class route overall.
- Zero-stop flights dominate almost every Business Class route.

Economy Class Insights

Chennai → Mumbai (Economy Class)

- Six airlines compete in Economy: Air India, AirAsia, GO_FIRST, Indigo, SpiceJet, Vistara.
- Chennai → Mumbai: Vistara max ₹1,14,704 vs min ~₹23,000 — wide top-end price gap.
- Most routes show a sharp price jump starting around 4 days before departure.
- GO_FIRST is notably expensive on Hyderabad → Mumbai.
- Zero-stop flights are the clear traveler preference across nearly all routes.

Cross-Cutting Patterns

Days-Left Price Trend (Bangalore → Kolkata, Business)

Prices spike sharply within the final 1-5 days rather than rising steadily — a repeated pattern across routes.

Stops Breakdown (Business, Hyderabad → Mumbai)

Zero-stop flights consistently outnumber one-stop and multi-stop options across almost every route.

Conclusion

1

Timing drives price

Sharp fare increases typically occur in the final 1–5 days before departure, not gradually.

2

Vistara commands a premium

In Business Class, Vistara is consistently priced above Air India across nearly every route.

3

Leadership shifts in Economy

No single airline dominates — Air India, SpiceJet, and GO_FIRST lead pricing on different routes.

4

Direct flights are preferred

Zero-stop flights are the most common choice across nearly all routes and classes.

These insights help travelers identify optimal booking windows and give airlines a route-level benchmark for competitive pricing.
